Reframe Systems

Sep 2025 - Present. Remote

Staff Software Engineer | Factory Software Team

- Architected and shipped Pixels to Parts, a data platform and pipeline transforming architectural exports and 3D models into tasks, text and image work instructions, and machine code for custom-designed and manufactured homes, supporting \$10M+ in contracted projects. **(Python, React)**
- Eliminated a major source of factory work stoppages by automating complex correctness checks across design and engineering, letting the company's design experts replace costly rework with continuously deployed, targeted fixes.
- Built Sidekick, an in-house tool for delivering work instructions and tracking time on the factory floor, taking it from prototype to full deployment in three weeks. **(Python, React)**

Nuna, Inc.

Feb 2024 - Dec 2024. Remote

Staff Software Engineer, Technical Lead | Product Development Team, Value Platform

- Served as technical lead for a 5-person engineering team to ship a full-stack web application that allowed users to develop healthcare financial projections, perform actuarial modeling, and generate sales materials for those projections. **(React, Python)**
- Led engineering implementation of net-new insurance program for mission-critical customer, including managing additional engineers from other teams in order to meet deadline. Managed multiple stages of deliverables over six months. **(React, Python)**

Boston Dynamics, Inc.

Feb 2021 - Jul 2023. Waltham, MA

Staff Software Engineer, Team Lead | Central Software Group

- Founded Cloud Services team to bring web development expertise to support robotics programs. Created initial high-impact production service as sole developer. Used project success to motivate company leadership to further invest in web services, growing team to three more developers.
- Built cloud-backed data warehousing and indexing platform, allowing robotics engineers to find relevant logging data and then fix customer issues remotely. **(Node.js, React)**
- Applied distributed engineering principles to scale from initial prototype to petabytes of indexed data with peak ingest in excess of ten gigabits per second and analysis SLAs of less than thirty minutes during business hours. **(Kubernetes, Google Cloud)**
- Implemented local development, staging, and continuous deployment infrastructure for new web systems. **(Python, Helm, Terraform)**

Facebook, Inc.

Senior Software Engineer | Release Engineering

Jan 2020 - Feb 2021. New York, NY

- Developed new platform for managing app and web releases to replace manual scripts and custom dashboards. Onboarded first release in six months. With additional team support, grew to six out of the "Big Eight" apps in another six months. **(React, Hack)**

Software Engineer | Website Signals

Aug 2017 - Jan 2020. Seattle, WA

- Developed Event Setup Tool, a web application injected onto third-party websites, allowing users to configure analytics setups on their own sites. **(React, Hack)**
- Supported revenue-critical analytics script loaded by billions of sites. Fixed compatibility bugs across browsers. Developed plugins to support new ads products and improve data integrity. **(JavaScript, Hack)**

Carnegie Mellon University

2013-2017. Pittsburgh, PA

B.S. in Computer Science, Minor in Robotics
